

This question paper contains 8 printed pages]

AY—192—2018

FACULTY OF SCIENCE

M.Sc. (Second Year) (Fourth Semester) EXAMINATION

MARCH/APRIL, 2018

(CBCS Pattern)

ORGANIC CHEMISTRY

Paper (CH-543/2)

(Organic Synthesis—II)

(Monday, 16-4-2018)

Time : 2.00 p.m. to 5.00 p.m.

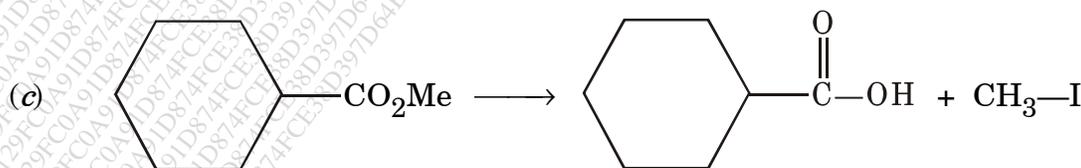

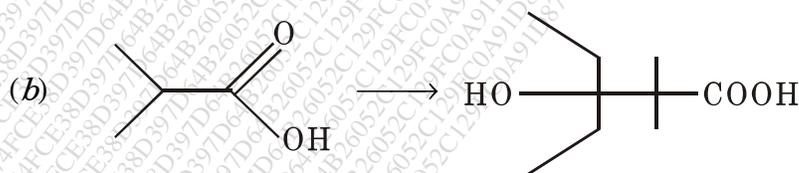

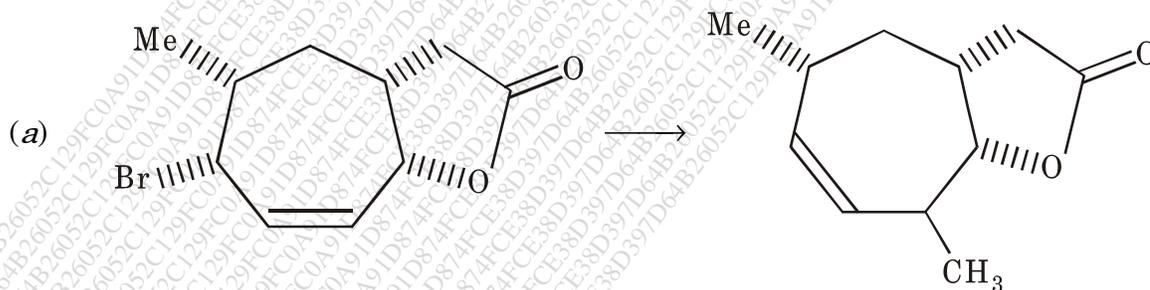

Time—3 Hours

Maximum Marks—75

N.B. :— (i) All questions are compulsory.

(ii) Figures to the right indicate full marks.

1. Suggest the suitable reagents for the following conversions (any three) : 15

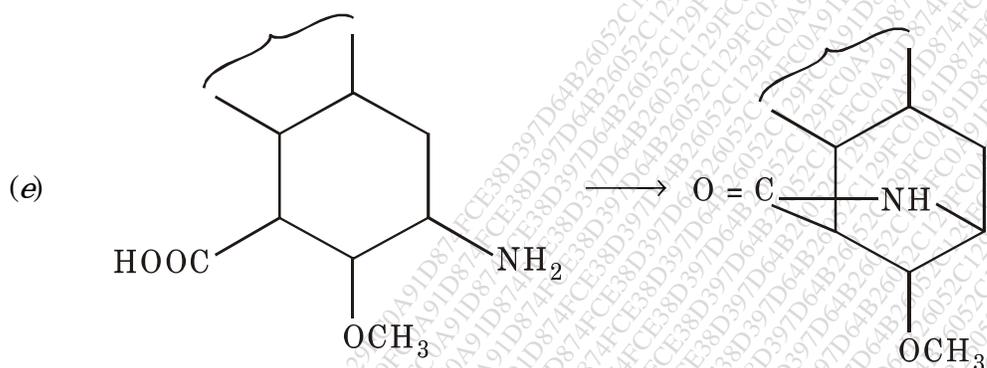

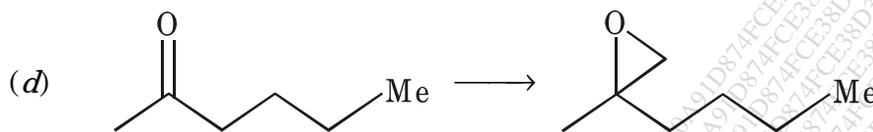

P.T.O.

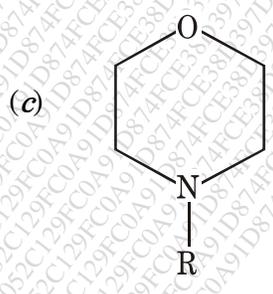

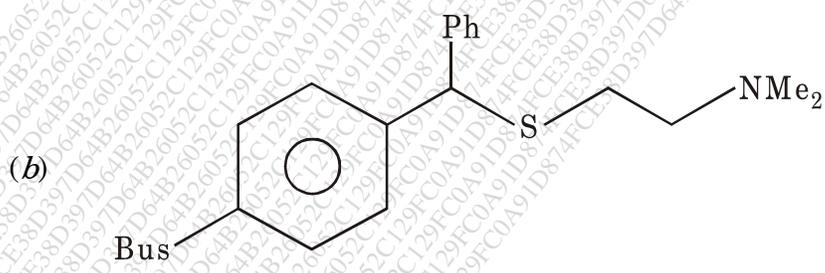

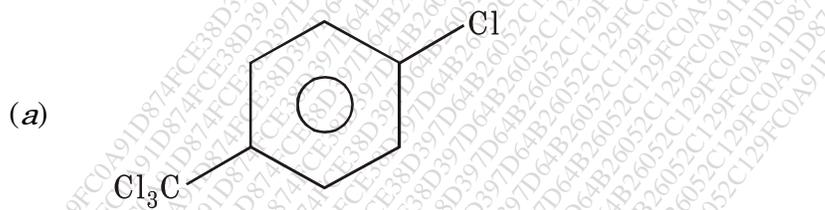

WT

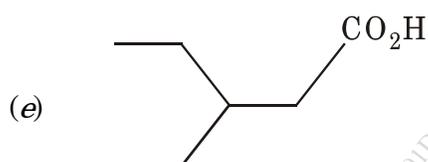

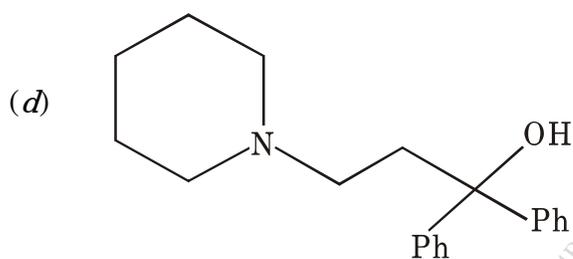

( 2 )

AY-192-2018

2. Using Retrosynthesis suggest suitable method for the synthesis of the following (any *three*) : 15

3. Solve the following :

(a) Explain with suitable example :

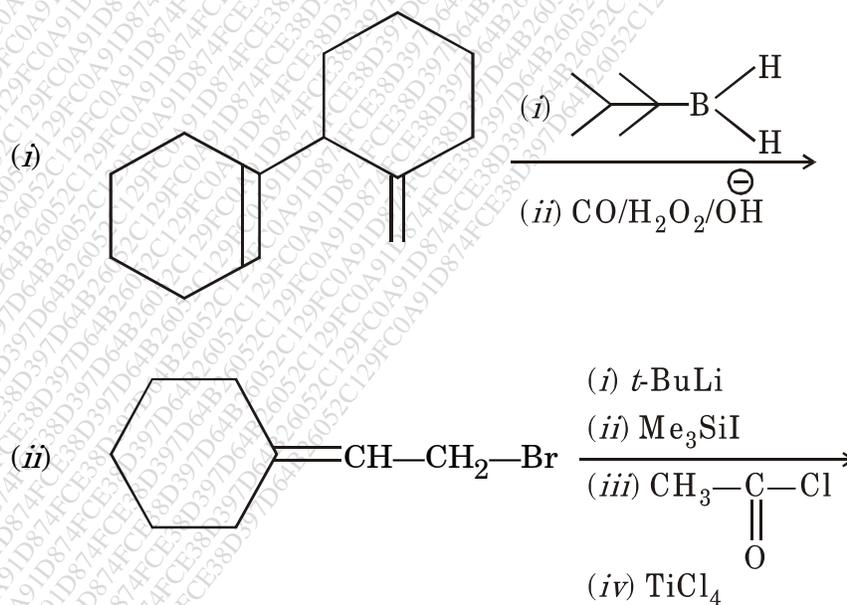

8

(i) Umpolung concept

(ii) Concepts of protecting functional group.

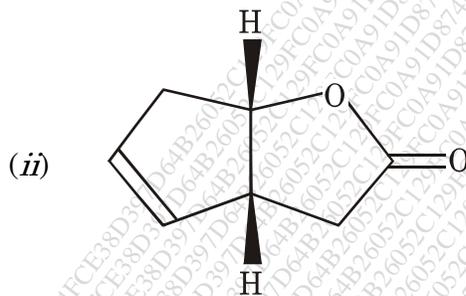

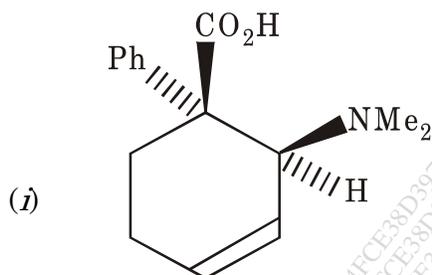

Or

Predict the product with mechanism :

P.T.O.

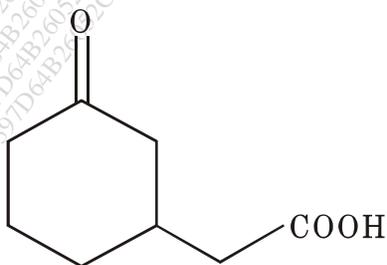

- (b) Using Retrosynthesis suggest suitable method for the synthesis of the following : 7

Or

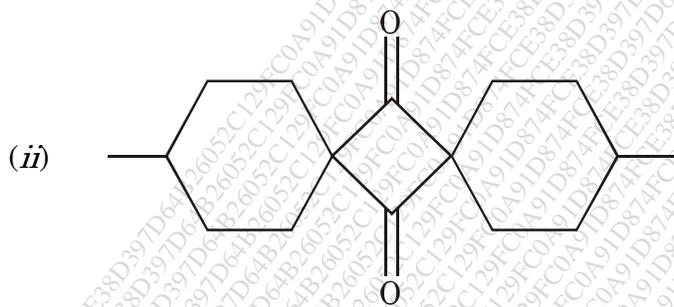

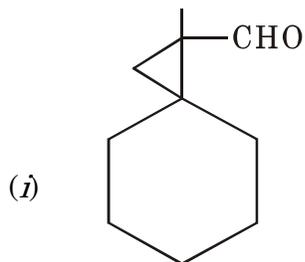

Solve the following :

- (i) Explain with examples synthesis of five members aromatic heterocyclic rings.
- (ii) Explain the synthesis of the following target molecule using Micheal addition reaction :

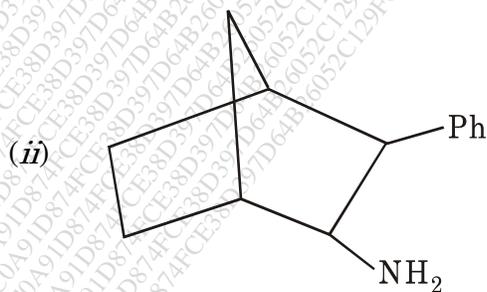

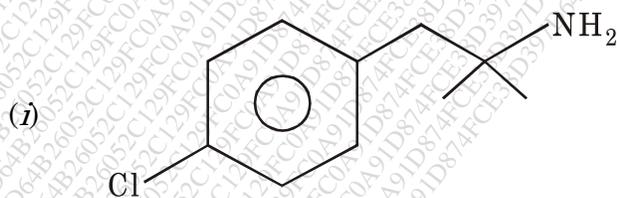

4. Solve the following :

(a) How will you synthesize the following compounds using Ketens : 8

Or

How will you synthesize the following target molecules using aliphatic nitrocompounds :

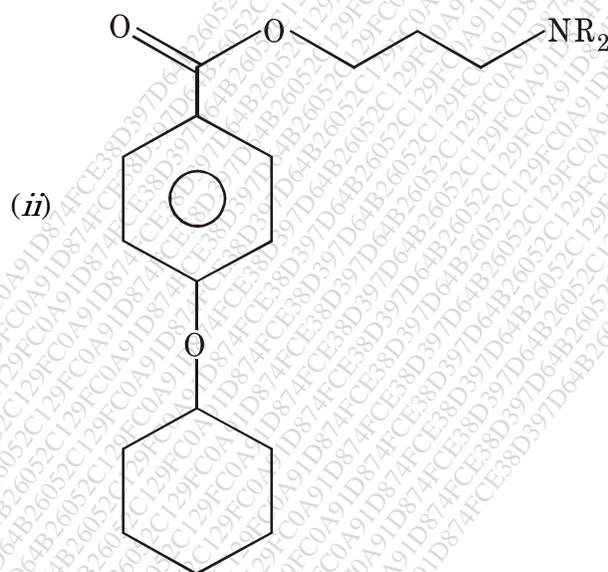

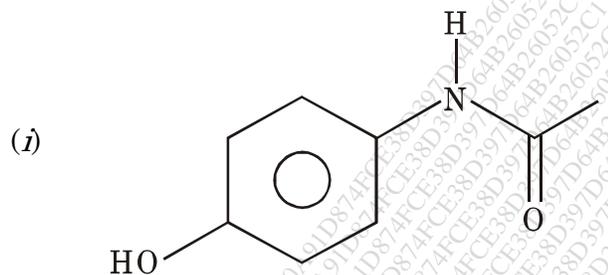

P.T.O.

(b) Describe the synthesis of Vitamin-D<sub>2</sub>.

7

Or

Using the concept of chemoselectivity how will you synthesize the following compounds :

5. (A) Select the *correct* answer from the following alternatives :

5

(i) LDA is :

- (a) Poor nucleophile
- (b) Strong base
- (c) Strong nucleophile
- (d) Both (a) and (b)

(ii) In the following conversion 'A' is :

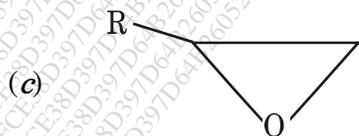

- (a)  $\text{H}_2\text{O}$   
 (b)  $\text{CuCN}$   
 (c)  $\text{ROH}$   
 (d)  $\text{CuCl}$

(iii) Enamines are prepared for the protection of :

- (a)  $\text{>CH}_2$   
 (b)  $\text{>C=O}$   
 (c)  $\text{-NH}_2$   
 (d)  $\text{>C=C<}$

(iv) The synthon  $\begin{array}{c} \oplus \\ | \\ \text{R}-\text{C}-\text{OH} \end{array}$ , its synthetic equivalent is :

- (a)  $\text{CH}_3\text{-O-R}$   
 (b)  $\begin{array}{c} \text{CH}_3-\text{C}-\text{R} \\ || \\ \text{O} \end{array}$

- (d) None of the above

P.T.O.

- (v) 1, 5-difunctionalized compounds on disconnection gives :
- (a) Michael acceptor
  - (b) Epoxide
  - (c) Aldehyde
  - (d) Carboxylic acid
- (B) Write short notes on any *two* : 10
- (i) Lead tetra-acetate
  - (ii) Two group disconnection in Diels-Alder Reaction
  - (iii) Synthesis of six member rings.
